

AssuranceAmerica Intelligence

User Guide & Best Practices

Preface

AssuranceAmerica is not unique in its desire to bring the power of Generative AI chatbots to its associates without compromising the security of the organization. Tools like ChatGPT have proven their value, particularly in the consumer sector, but their economic model is often in conflict with the compliance policies and specific needs of organizations. To address this, companies have begun providing their associate base with custom alternatives. AssuranceAmerica Intelligence (AAi) is our alternative.

The decision to build our solution in-house rests upon the following tenets:

- Enterprise-first security, identity, and data isolation by design
- Deep integration with internal documents, systems, and workflows
- Governed prompts, models, and tools aligned with company policy
- Custom roadmap driven by internal needs, not public desires

ChatGPT is an excellent general AI. AAi is purpose-built for how **our company** works.

General Instructions

AssuranceAmerica Intelligence is available at <https://assuranceamerica.ai> With security in mind, the system is only available from within our firewall (office locations and via the VPN) and is protected with user authentication. If prompted to log in, use your standard company username and password.

In Microsoft Teams, an “AAi” channel has been introduced under the “AssuranceAmerica” team. This channel provides the opportunity to collaborate with your fellow associates, discuss findings and use cases, ask about solutions, and request enhancements. This channel will be monitored by IT to provide assistance as necessary.

Best Practices

The following recommended practices are not necessarily specific to AssuranceAmerica Intelligence, but broadly applicable to most Generative AI chatbots. Using these suggestions will lead to the best, most accurate results from AAi. Most importantly, **AAi is a productivity assistant — not a system of record or final decision-maker; use it accordingly.**

1. Keep conversations focused.

- Ask **one clear question or task at a time**.
- Start a **new conversation** when the topic changes.

Why: Focused conversations reduce confusion and improve answer quality.

2. Include only necessary context.

- Attach **only documents, images, or data** relevant to your question.
- Remove outdated or unrelated files.
- Re-upload documents if they change.

Why: Too much context can confuse the AI model and increase the risk of incorrect responses.

3. Be explicit about what you want.

- Clearly state your goal: *summary, explanation, comparison, draft, or analysis*.
- Specify constraints like **format, length, tone, or audience**.

Example:

“Summarize this policy document in 5 bullets for a non-technical audience.”

4. Use follow-up questions to refine results.

- Treat AAi like a collaborator, not a search engine.
- Correct or redirect when needed.

Examples:

“That’s not what I meant — focus on section 3.”

“Use the attached document as the source of truth.”

Why: Iteration leads to better and more accurate outputs.

5. Verify important outputs.

- Double-check facts, calculations, and conclusions.
- Always review content used for:
 - Decisions
 - External communications
 - Regulatory or customer-facing material

Why: AI assists judgment — it does not replace accountability.

6. Use AAI for drafts, not final authority.

- Use AAI to:
 - Create first drafts
 - Summarize complex information
 - Explore options and ideas
 - Apply **human review** before finalizing.
-

7. Start a new conversation when work changes.

- New task = new chat.
- Don't reuse old conversations for unrelated work.

Why: Old context can unintentionally influence new answers.

8. Know what AAI is best at.

AAI works best for:

- Understanding and summarizing information
- Drafting and refining content
- Answering questions based on provided context
- Assisting with analysis and reasoning

AAI is **not** a replacement for:

- Source systems
- Final approvals
- Professional judgment

Feature Matrix

In its infancy, AssuranceAmerica Intelligence will evolve over time. Below is a feature matrix comparing AAI to ChatGPT. The purpose of this matrix is to inform you of what is possible with the tool and provide a glimpse at what features will be made available in the future.

Feature	Description	AAI	ChatGPT (Consumer)	Why It Matters
Natural language understanding	Type your questions in plain English. Get instant, helpful responses. Continue the conversation naturally. Ask follow-up questions anytime.	✓	✓	Reduces training time and increases adoption across the organization.
Chat with your Documents	Upload any file and start asking questions. Upload PDFs, Word documents, PowerPoint presentations, Excel workbooks, or images. Ask anything: "What's the main point of this contract?" Compare documents: "How do these two reports differ?"	✓	✓	Turns static documents into interactive, searchable knowledge.
Internal systems & data connectivity	Secure, identity-aware access to internal systems and data sources (e.g., query claims and policy systems, pull live data from databases or data lakes, read/write to internal APIs, trigger workflow)	✓ Native, governed, first-class integration	✗ Not supported	Determines whether AI can safely operate on real enterprise systems and data, not just reason over uploaded files or public information

Understand images	Show, don't just tell. Upload photos of charts, diagrams, or screenshots. Ask about what you see: "What does this graph show?" Extract information from images automatically. Discuss multiple images in the same conversation. Example: Take a photo of a whiteboard and ask "Can you summarize these meeting notes?"	✓	✓	Extracts insight from diagrams, screenshots, and photos without manual effort.
Keep track of everything	Automatic saving: all your chats are remembered. Smart titles: conversations get descriptive names automatically.	✓	✓	Preserves institutional knowledge and user context.
Create new documents	Generate PDFs and Word docs from your discussions. Meeting summaries, reports, proposals - all AI-created. Professional formatting applied automatically. Download and share instantly.	✓	✓	Accelerates content creation and standardizes outputs.

Your data stays private	Secure and personal. Your documents are yours - only you can see them. Enterprise-grade security protects your information. Easy login with your company account.	✓	⚠ Limited controls	Critical for regulatory compliance and user trust.
Include web search	Be able to include up-to-date information from the web included in the chat context.	✓	✓	Ensures answers stay current and relevant.
Code interpreter	Run Python for analysis and data work.	⚠ Limited	✓	Allows advanced analysis directly inside chat.
User defined projects	Create projects to group files and chats together for specific tasks or research.	Upcoming	⚠ Limited	Keeps complex work organized and repeatable.
Generate images	Be able to use natural language to generate images.	Upcoming	✓	Speeds up ideation, design, and communication.
Model selection	Allow the user to select between different approved models.	Upcoming	⚠ Limited	Allows tuning for cost, speed, or reasoning depth.
Save prompts	Save prompts to use for repeatable tasks. Be able to store and recall separately from chat history.	Upcoming	⚠ Custom GPTs	Enables repeatable, high-quality workflows.
Global prompts	Access company-developed and approved prompts.	Upcoming	✗ Not supported	Ensures consistency and governance across teams.
Personalized experience & memory	“Learn” about the user during interactions over time. Understand what they do and respond according. Remember preferences across chats.	Upcoming	⚠ Limited	Improves relevance and efficiency over time.

Search conversations	Easy search box to easily find past conversations.	Upcoming	✓	Prevents loss of valuable insights.
Voice interaction	Speak and listen to the assistant.	Upcoming	✓	Improves accessibility and hands-free use.
